

# Esri Drone2Map Workshop

Drones have grown in popularity for capturing high-resolution imagery. In this workshop, we will discuss how to import drone imagery with Esri's Drone2Map. The training is targeted to anyone who wants to capture large or small study areas with common drone hardware. We will provide presentations and demonstrations, as well as opportunity for you to load and run a trial version of Drone2Map with trial software and data on you own Windows device.

- Understand workflows for producing 2D and 3D products from drone imagery.
- Learn how to share products to ArcGIS Online and visualize them using web and desktop clients.
- Create an inspection project, view the images in the inspection viewer, add notes right on the image and save it.
- Includes linkages to ArcGIS Pro, but can be run without using Pro.
- Learn visualization techniques using web and desktop clients.
